QUANTIL's global roll-out accelerates

QUANTIL, initially launched as MileWeb, is officially launching its global Mobile Acceleration solution and Middle East presence.

Santa Clara, California: While changing its brand from MileWeb to a more globally appropriate QUANTIL, the Content Delivery Network backed by ChinaNetCenter officially launches its global Mobile Acceleration solution and expansion into the Middle East by adding a POP in the United Arab Emirates.

QUANTIL's global services already included enterprise application and carrier network acceleration besides offering core CDN solutions such as download, media and website acceleration (including dynamic content acceleration). With the global launch of its Mobile Acceleration, QUANTIL is now also providing its customers with accelerating of the Last-Mile and increasing mobile web and native app loading speeds and availability. "Our Mobile Acceleration solution completes the full circle which enables us to accelerate any type of content over any connection and for any device" says Bin Ni, VP of Engineering at QUANTIL.

The addition of a Point of Presence in the Middle East adds another important factor to QUANTIL's offering. The Middle East is seeing some of the highest internet related growth numbers and QUANTIL is expecting impressive growth from the region in the coming years. Through cooperation with Etisalat the company will be providing content delivery to the Middle East and parts of Africa.

About QUANTIL: QUANTIL provides a straightforward approach to global content delivery acceleration. Founded by engineers in Silicon Valley and backed by an overseas market leader the company focuses on providing true value for customers and simplifying integration in the process.

QUANTIL: "Connecting users with content...it's that simple."
